

Commend International presents im3: the world's smallest IP intercom module with extra-large communication power

Salzburg, March, 29th, 2023

Devices in the consumer space have proven quite impressively that powerful computers can find room in small (and even extra-small) packages. With the new IP-based intercom module im3, Commend has now demonstrated this in the area of security and communication. The im3 shows impressive performance as a communication and control centre while sporting a sleek design in the world's smallest form factor. It is also fully networkable with lots of connectivity option, which makes it ideal for installation purposes of all kinds.

Measuring just 84.5 mm long, 54 mm wide and 24 mm high, Commend's new IP intercom module im3 can fit in the palm of a child's hand. With the small but powerful im3 at the centre, it is possible to create highly compact, high-performance video Intercom stations – extended for example with accessories such as the external loudspeaker module LSM and the video camera module cm1. Thanks to their compact dimensions, im3 solutions will also fit into tight spaces (e.g., as emergency call stations in light poles).

Small in size, the im3 is big on performance, offering the usual range of functions of its “big siblings” from the brand-new Commend Symphony MX generation of devices:

- Excellent audio quality (up to 20 kHz)
- Multiple connection options, e.g. for external audio sources and speakers
- Optional camera module placed at a distance up to 3m - at the same time offering fully encrypted and synchronized audio and video transmission
- Flexible management and (remote) control, e.g. via central control desks or control centres
- Cyber-secure from the ground up in accordance with the concept of “Privacy and Security by Design”.
- Robust, durable design
- Suitable for outdoor and indoor use
- Uniquely wide operating temperature range (-40°C to +70°C)

Equipped this way, the im3 is a perfect fit for a wide range of applications: for example, as a customer call point in parking barriers, automatic pay stations or electric charging stations. If required, it can

even function as an emergency Intercom station in public areas within the security networks of Smart Cities.

Individually created solutions based on im3 are very easily scalable and also integrate seamlessly with third-party systems (e.g., building management or security systems). The possibilities are virtually endless.

“Small is beautiful, as they say,” comments Commend’s product manager Johann Linortner. “This is also true of our compact, stylish im3. But the Commend brand has always stood primarily for reliable, secure communication, anytime, anywhere. So we made sure that ‘small’ in the case of our im3 is also quite ‘powerful’.”

About Commend:

Commend is passionate about innovating and perfecting communication and security technology. For more than 50 years Commend has been translating this passion into Intercom and Public Address solutions that customers can always trust to support and protect their business, reputation, assets and even lives. The customer’s voice, needs and trust are the key inspiration for all that Commend does, from research and production to installation and aftersales services. The result are high-class products that are built around the customer’s requirements to serve their specific business and safety needs – whether in road tunnels, on loud and dirty factory floors or in antiseptically clean healthcare and production facilities, on ships, yachts, or trains, and in places from car parks to office buildings and Smart Cities. All this is made possible by over 550 passionate individuals that work together as one across Commend’s worldwide support network, dedicated to ensuring that this corporate mission is acted upon.
