VDG SENSE

Our answer to seamless Video Management

Based on an open platform and tailored to your specific needs, our user-friendly software is developed with the end-user in mind and allows for adjustments in almost any way.

TKH Security values a well-defined product development life cycle with a focus on quality and cybersecurity.

In order to benefit from these cybersecurity improvements and other upcoming features, we strongly recommend our valued clients upgrading to VDG SENSE version 2.7.

VDG SENSE 2.7.

Our updates for your Cybersecurity

Having cyber secure products that can keep up with the challenges and changes of security is essential – and we realize the importance of how we monitor and improve our offerings to protect our customers' vital security systems.

Our Video Management software has now been upgraded to VDG SENSE 2.7., fully dedicated to covering the latest developments and necessary considerations in cybersecurity today and tomorrow.

How do we take confidence in following the right path in cybersecurity? Along with leveraging our 25 years of experience in the security industry, vulnerability assessments and white box penetration tests have been carried out by a renowned independent 3rd party. This assures this newest version of VDG SENSE includes the best possible improvements to protect your system against cyberattacks.

Cybersecurity highlights in VDG SENSE 2.7.

> All server-client communication is encrypted

> License model has been changed from 'sensor count' to IP address

> Improved Failover functionality

> No more default passwords, all passwords need to be configured

> AES 256 password encryption

> Mandatory password complexity

* The total security level of the system is also dependent on keeping your Operating System up to date.

Promotional Software Upgrade Plan (SUP)

With the Software Upgrade Plan (SUP), you are assured of the latest security and continuity updates to the VDG SENSE system. The software version with its features ensures that your software and security level meets the latest available standard. In addition to improvements and security updates, updated software also provides new functionalities to VDG SENSE. Newer versions of the software are released periodically through updates and made available through our service page.

The price of a SUP is determined by the licenses purchased and a fixed maintenance percentage relative to the purchase price. When a SUP is purchased within 1 year of the purchase date of your software, it is possible to purchase a SUP for a period of 1 to 5 years starting at 15% for 1 year, increasing to 45% for 5 years. Purchase of a SUP after the first year of the purchase date is still possible, but only for a period of 5 years, at 60% of the current license price. Please note that in all cases, the start date of a SUP is the purchase date of the software.

Systems with a valid SUP can upgrade to 2.7. by following the steps in the release notes, which can be found on our website along with the software download link.
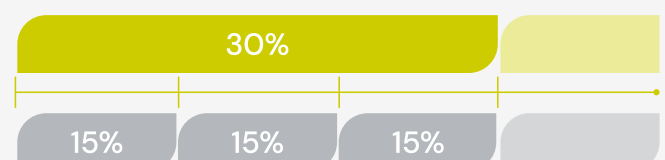

TKH Security values cyber secure systems and therefore offers an upgrade to 2.7. for systems without a valid SUP at a discounted price, combined with mandatory upgrade coverage for the next 3 years.

Software upgrade for licenses older than 1 year from original purchase date for 25% instead of the 60% fee (SU-WS).

Software upgrade for the next 3 years (SU-WS3) is mandatory:

> paid at once - fee of 30%
> paid annually - fee of 15% (per year)

25%	35%

30%	

15%	15%	15%	

With this SUP program package offer you are guaranteed to have:

> High level cybersecurity protection

> Up to date GDPR compliance

> Updated systems with new features

Rules of upgrade:

> All licenses that have been purchased before 1 May 2022 and have no SUP or an expired SUP are eligible for this upgrade and SUP program

> All VDG SENSE licenses are eligible for upgrade

> Value of the offer is calculated, based on H1 2023 software prices

> The client must be seated in Europe

> This promotion is valid until 1 August 2023

When upgrading to VDG SENSE version 2.7. or higher, the hardware and operating needs to be checked and verified. Minimum hardware requirements for VDG SENSE:

> Windows 10 - 64 bit
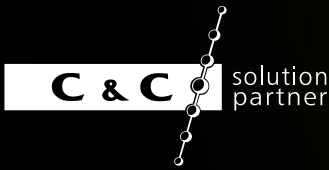

> 8GB RAM Memory (16GB recommended)

Upcoming Features

The following features in VDG SENSE 2.7.X are planned for H1 2023:

- User defined Privacy Mask
- Comments to Video Export
- Custom OSD messages
- New video tag GUI
- Native Export via API
- Citilog integration
- RTSP plugin audio support
- PCM 24Bit Audio supported for Siqura devices

Other features and functionalities expected in 2023:

- Continued cybersecurity improvements
- Dynamic Object Blurring
- Object Tracking for ObjectC to enable tripwires
- ObjectC improvements
- RTSP Plugin to support 128 connections
- Audit Trail – Track user actions
- Linux support
- FLINQ Client – SENSE Client integration

TKH Security wants all clients and partners to benefit from these cybersecurity improvements, therefore we strongly recommend upgrading to VDG SENSE 2.7. or higher.

Advantages of this promotional offer:

> Pentested cyber secure solution

> Secure communication between server and client

> New camera models and drivers are included

> Cheaper than new licenses

> Identical software versions across multiple end-users resulting in ease of commissioning and support

> Possibility to upgrade with features listed above for the next 3 years

> 35% discount on the combination of SU-WS and SU-WS3
